

ANT130R

Single-Axis Rotary Direct-Drive Nanopositioning Stages

- High resolution (0.01 arc sec)
- High performance
- Unlimited rotation
- Outstanding error motion specifications
- Excellent in-position stability
- Multi-axis configurations
- High dynamic performance

The ANT130R direct-drive rotary stages are designed as part of Aerotech's nano Motion Technology product family. Our rotary stages offer unprecedented in-position stability (0.005 arc sec) and sub 0.01 arc-sec incremental motion performance, and are offered in two grades of accuracy.

Multi-Axis Capabilities

The ANT130R series is designed for compatibility and easy integration with Aerotech's ANT linear stage product offerings. Together these stages provide accuracy, stability, and small-size performance capability for almost any nano-manufacturing or inspection application.

Dynamic Performance

In addition to the high precision levels, these systems offer high dynamic performance and throughput ideal for processes that require speed and precision.

Durability

The ANT130R stage series was designed to operate in a 24/7 manufacturing environment. Unlike other rotary devices, the ANT130R requires no periodic maintenance, assuring years of trouble-free operation.

Integration (Required)

Aerotech offers both standard and custom integration services to help you get your system fully operational as quickly as possible. The following standard integration options are available for this system. Please consult Aerotech if you are unsure what level of integration is required, or if you desire custom integration support with your system.

-TAS	<p>Integration - Test as system</p> <p>Testing, integration, and documentation of a group of components as a complete system that will be used together (ex: drive, controller, and stage). This includes parameter file generation, system tuning, and documentation of the system configuration.</p>
-TAC	<p>Integration - Test as components</p> <p>Testing and integration of individual items as discrete components that ship together. This is typically used for spare parts, replacement parts, or items that will not be used together. These components may or may not be part of a larger system.</p>
